

Using High Harmonic Spectroscopy to Learn about Molecular Structure and Dynamics

David Villeneuve

Steacie Institute for Molecular Sciences, NRC, Canada

CV:

1980 PhD University of Waterloo

1980-82 University of Rochester

1982-present NRC

Research: Head of the attosecond science program at NRC. Investigating relationship between photoionization cross sections of atoms and molecules as measured in synchrotrons, and the photorecombination cross section that is the third step in high harmonic generation.
